SUMMARY

Product manager with two years of end-to-end ownership on consumer-facing platforms - staged rollouts, funnel instrumentation, live telemetry, & cross-system integration at scale. Now applying that to games: seven published teardowns on live-service economy, progression gating, retention & mobile F2P monetization, including a Machinations model of Warframe's Venus Gate economy, a forecast graded against launch on the record, and a hand-logged mobile teardown shipped with a working web tool. Looking for a product role on a live title.

PROJECTS

- **Match Factory!:** where the game asks you to pay - mobile F2P, hand-logged
 - 52 levels logged by hand on one account at Indian pricing; the coin balance never went negative while priced offers arrived from level 15.
 - The call: gate the first priced offer on a measured need state, not a level number. Shipped with a live React tool that reads the play log.
- **Warframe: The Venus Gate** - Machinations economy model built on 20 measured runs: the drop table decides the player's wait 0.6% of the time; the resource threshold sets it.
- **Publish the Bill Before the Grind** - Product brief off that model: the fix players ask for buys 1.8 minutes, the one they never see buys 12 hours. Options priced, tradeoffs named, & the AI version rejected on the record.
- **Warframe: Iceblade of Narin** - Dated pre-launch retention plan for a bridge update: how to tell a frame rework players return to from one they shelve, measured at D14.
- **Forecast Scorecard** - A live-ops forecast written a month early, locked, then graded against the shipped patch: three of four claims missed, each named, with the original published unedited beside the grade.
- **Warframe: Tau** - Dated pre-launch instrumentation plan for an unreleased star system: day-one telemetry, economy guardrails & paired north-star / counter-metrics.
- **NFS: Most Wanted in 2026?** - Why sanitizing arcade-racing risk for D7 retention breaks the loop that made the genre work.

PROFESSIONAL EXPERIENCE

Product Manager | Game Economy & LiveOps, Independent Practice Nov 2025 - Present

- Model and publish quantitative economy teardowns of live-service titles under declared protocols: 20 measured runs behind the Warframe economy model, 52 hand-logged levels behind the mobile F2P teardown, with the instrument's limits published beside each finding rather than after it.
- Reconstruct early-game progression to locate drop gates, resource bottlenecks & pacing constraints; stress-test with Monte Carlo simulation in Machinations. Work ends in a product brief that resolves the binding constraint without devaluing the grind.
- Publish dated forecasts before outcomes are known, then grade them on the record: three of four claims in the last scorecard missed, each named, with the original left unedited beside the grade.

Product Manager | Digital Lending Platforms, Bajaj Finserv Jan 2025 - Jul 2025

- Ran a staged rollout from 1% to 100% of traffic in 6 weeks on a two-partner consumer platform, gating each cohort on live funnel health - 15,000+ qualified users through the funnel before full release, zero P0 incidents at launch.
- Owned funnel instrumentation end to end: SQL-backed dashboards tracking acquisition through conversion, stage-wise drop-off analysis, & daily live-health monitoring - post-launch conversion up 10% on the resulting changes.
- Designed SSO token handshake & real-time state sync between two partner platforms & internal backends, keeping user stage data consistent across three systems - cross-system transmission failures down 40%.
- Spec'd a three-tier client-to-backend architecture (PWA to middleware to systems of record) across 4 product verticals with distinct rules engines; owned API contracts & integration specs - downstream engineering rework down 25%.
- Built release readiness & incident process for a 5-team launch: 250+ test cases across web, mobile & backend automation, plus severity matrix & escalation protocol.

Associate Product Manager | Digital Lending Platforms, Bajaj Finserv Nov 2024 - Jan 2025

- Produced interaction specs, flows & wireframes in Figma & Draw.io that survived CEO-level review, cutting partner & engineering review cycles by roughly 30%.
- Ran 100+ validation cases per user journey against spec, catching cross-system data mismatches before each phased release.

Associate Product Manager | Digital Application Journey, Bajaj Finserv Jun 2023 - Nov 2024

- Lifted application conversion 15% through funnel analysis & first-session friction removal on Credit Card Journey: new-versus-returning segmentation, dynamic auto-fill, & early-stage eligibility filtering that stopped users entering flows they could not complete.
- Owned the backlog end to end - user stories, acceptance criteria, grooming - raising squad velocity 20% & holding 100% sprint goal adherence across 6+ consecutive cycles.
- Cut post-release defect rate 25% & release cycle time 18% through structured test coverage, SFDC Inspector analysis & systematic triage.

ADDITIONAL INFORMATION

- **Aug 2025 - Mar 2026:** Full-time primary caregiver for 2 family members. Completed the McKinsey.org Forward Program in this period, and from Nov 2025 ran the transition into games alongside it; full time on this work since Mar 2026.

SKILLS

- **Games & LiveOps:** Economy modelling & simulation (Machinations), faucet/sink & sink-pressure analysis, drop-table & progression-gate analysis, offer timing & store-pricing analysis from first-hand play logs, battle-pass & cosmetic monetization teardowns, player-lifecycle funnels, retention cohorts (D1/D7/D30), ARPDau, live-title performance diagnosis - applied in published teardowns & economy models, not in a shipped title.
- **Product & Strategy:** Product roadmapping, 0-to-1 launches, PRD/BRD authoring, backlog ownership, user story definition, OKR/KPI definition, funnel analysis, phased-rollout & staged-cohort experimentation, go-to-market execution.
- **Data & Analytics:** Excel/Sheets modelling, SQL/SoQL, cohort & funnel analysis, retention & engagement metrics, stage-wise drop-off & root-cause identification, dashboarding (Salesforce, Pendo).
- **Prototyping:** React, TypeScript & Vite front-ends deployed on Vercel; machine-readable PRDs driving AI-assisted builds; hand-logged data schemas & CSV-driven analysis tools, shipped public with source.
- **Delivery & Craft:** Agile/Scrum, sprint planning, backlog grooming, issue triage, cross-functional coordination across product, engineering & partner teams; Figma & Draw.io for flows, wireframes & interaction specs.
